The History of Life on Earth

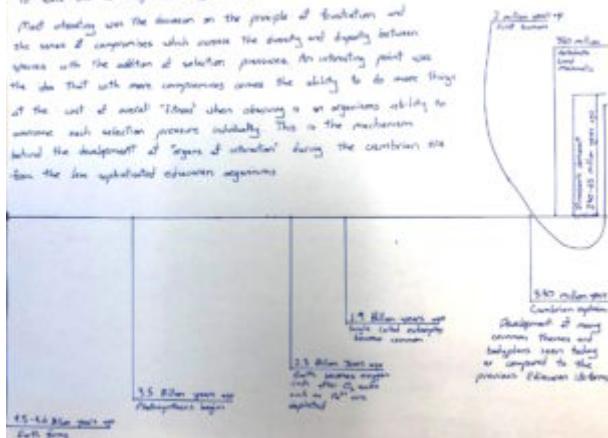

Anjali Tampy

Chloe Novak

To quite short at major meetings.

Most breeding was the focus on the principle of **franklinism** and the search for compromises which would be the **strength and dignity** between species with the addition of selection processes. An interesting point was the idea that with more compromises comes the ability to do more things at the cost of model. "Thus when choosing is an organism's ability to overcome each selection pressure individually. This is the mechanism behind the development of *Taylor's Law* of selection" during the centaurian era from the five synthesized education arguments.

Andrew Gee
